

Announcement:

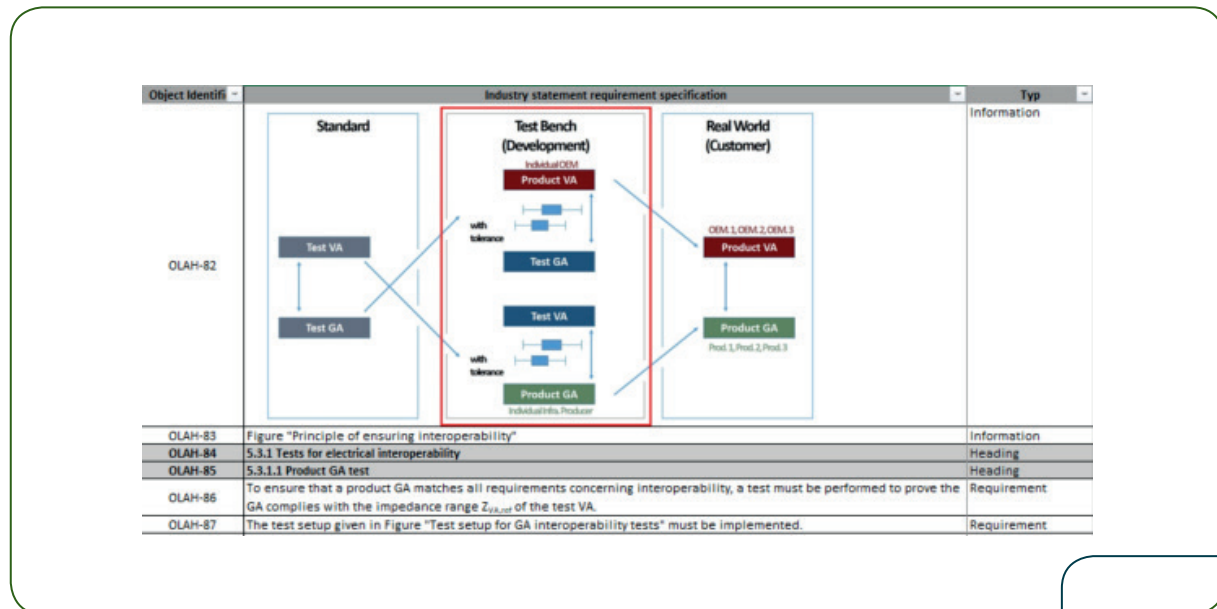

CharIN creates a requirements specification for interoperable wireless power transfer

Members of CharIN worked out an open specification sheet for an interoperable wireless power transfer system for electric vehicles within the scope of CCS. The work is based on the available position paper „CharIN industry statement on interoperable wireless power transfer“ and contains proper technical requirements to make interoperable inductive charging possible. Members of CharIN have full access to the document.

Please contact the Coordination Office for further questions.
